Overview of Non-Mendelian Inheritance

Introduction to non-Mendelian inheritance; Mendel's laws not fully applicable; complications in genotypic and phenotypic ratios.

### Incomplete dominance

- Neither allele is dominant and heterozygous individuals have an intermediate phenotype.
- For example, A cross between red and white flowered plants produced plants with intermediate flower colour i.e. pink colour in F1 and a modified ratio of 1 red: 2 pink: 1 White in F2.
